

Our Core Salesforce Expertise

Technical Stack

Salesforce

- **Apex** - Robust backend logic for custom business processes, automation, and triggers to enhance Salesforce functionality.
- **Lightning Web Components** - Modern, high-performance UI components for dynamic and responsive Salesforce applications.
- **Aura** - Legacy and complex component framework for maintaining and extending existing Salesforce applications.
- **Visualforce** - Custom page development for tailored user interfaces and advanced reporting solutions.
- **JavaScript** - Frontend scripting for interactive user experiences, dynamic forms, and client-side logic.
- **REST API** - Seamless integration with external systems and real-time data exchange to extend Salesforce capabilities.

Integration middle ware

- **Heroku** - Cloud platform for deploying scalable applications and extending Salesforce with custom services.
- **Mulesoft** - Enterprise-grade integration for connecting Salesforce with multiple systems efficiently.
- **Celigo** - Automation and integration platform for syncing data between Salesforce and external apps.
- **Skyvia** - Cloud-based data integration and backup tool for seamless data management.

DevOps

- **GearSet** - Deployment, version control, and release management for efficient Salesforce DevOps practices.
- **GitHub, Bitbucket, GitLab** - Source code management and collaboration across development teams.
- **CI/CD** - Continuous integration and deployment pipelines to ensure fast, reliable, and error-free releases.

Project Management & Documentation

- **Jira** - Agile project tracking, sprint planning, and issue management for organized project execution.
- **Confluence** - Centralized knowledge base for documentation, processes, and team collaboration.
- **Postman** - API testing and validation tool for reliable integrations and system connectivity.
